

Application No. 09/911,673  
Response to Office Action

Customer No. 01933

**Listing of Claims:**

Claims 1-5 (Canceled).

6. (Currently Amended) A display system according to  
claim 5, wherein comprising:

a host apparatus having an image output interface;

a display apparatus which is operated by supply of at least  
5 one of a video signal and power from said host apparatus; and  
a communication interface for communicating data between  
said host apparatus and said display apparatus;

wherein said display apparatus further comprises:

a storing section for storing power consumption data;

10 a memory storing section for storing on-screen display  
information; [[,]] and said

a display-side communication-section transmits for  
transmitting said stored power consumption data and said on-  
screen display information; , and in

15 wherein said host apparatus , said comprises:

a host-side communication section receives for  
receiving said power consumption data transmitted from said  
display apparatus and said on-screen display information; , and  
said host apparatus further comprises

Response to Office Action

Customer No. 01933

20           a power control section for entirely performing power control of said display system based on said power consumption data received from said host-side communication section; and

          an information superimposing section for superimposing said received on-screen display information on the video signal.

7. (Previously Presented) A display system comprising:

a host apparatus having an image output interface;

a display apparatus which is operated by receiving at least a video signal from said host apparatus; and

5           a communication interface for communicating data between said host apparatus and said display apparatus,

          wherein said display apparatus comprises a memory for storing on-screen display information, and a display-side communication section for transmitting the on-screen display information,

10           wherein said host apparatus comprises a host-side communication section for receiving the on-screen display information transmitted by said display apparatus, and an information superimposing section for superimposing the received on-screen display information on the video signal, and

15           wherein in said display system, said host-side communication section transmits the video signal having the on-screen display information superimposed thereon, said display-side communication

Customer No. 01933

section receives the transmitted signal, and said display  
20 apparatus displays an image of said on-screen display  
information.

Claim 8 (Canceled).

9. (Previously Presented) A system according to Claim 7,  
wherein said communication interface has a specification for  
communication between said host-side communication section and  
said display-side communication section which conforms with a  
5 DDC1/DDC2B/DDC2AB standard prescribed by Video Electronics  
Standards Association or an expansion function thereof.

Claim 10 (Canceled).

11. (Previously Presented) A system according to Claim 7,  
wherein said display apparatus includes a mode for operating only  
said communication interface for communication with said host  
apparatus.

Claim 12 (Canceled).

Application No. 09/911,673  
Response to Office Action

Customer No. 01933

13. (Original) A system according to Claim 7, wherein said display apparatus further comprises an indicator lamp for alarm display.

14. (Previously Presented) A system according to Claim 6, wherein:

said host apparatus further comprises a first memory for storing on-screen display information thereof, and a second  
5 memory for storing the on-screen display information of said display apparatus which is received via said host-side communication section, and

said information superimposing section converts the on-screen display information stored in at least one of said first  
10 memory and said second memory into indicatable bit map information, and superimposes the indicatable bit map information on the video signal.

15. (Previously Presented) A system according to Claim 7, wherein:

said host apparatus further comprises a first memory for storing on-screen display information thereof, and a second  
5 memory for storing the on-screen display information of said display apparatus which is received via said host-side communication section, and

Response to Office Action

Customer No. 01933

10        said information superimposing section converts the on-  
screen display information stored in at least one of said first  
memory and said second memory into indicatable bit map  
information, and superimposes the indicatable bit map information  
on the video signal.

16. (Previously Presented) A system according to Claim 6,  
wherein said on-screen display information comprises ASCII text  
data.

17. (Previously Presented) A system according to Claim 7,  
wherein said on-screen display information comprises ASCII text  
data.

18. (Previously Presented) A system according to Claim 6,  
wherein said display apparatus is adapted to be selectively  
connected to a plurality of types of host apparatuses.

19. (Previously Presented) A system according to Claim 7,  
wherein said display apparatus is adapted to be selectively  
connected to a plurality of types of host apparatuses.

Application No. 09/911,673  
Response to Office Action

Customer No. 01933

20. (Previously Presented) A system according to Claim 6,  
wherein said host apparatus is adapted to be selectively  
connected to a plurality of types of display apparatuses.

21. (Previously Presented) A system according to Claim 7,  
5 wherein said host apparatus is adapted to be selectively  
connected to a plurality of types of display apparatuses.

Claims 22-25 (Canceled).

26. (Previously Presented) A method for controlling a  
display system including a host apparatus and a display  
apparatus, said method comprising:

supplying at least a video signal from the host apparatus to  
5 the display apparatus to operate the display apparatus;

transmitting on-screen display information stored in the  
display apparatus from the display apparatus to the host  
apparatus;

superimposing the on-screen display information received by  
10 the host apparatus onto the video signal supplied from the host  
apparatus to the display apparatus; and

displaying an image of the on-screen display information on  
the display apparatus based on the video signal having the on-  
screen display information superimposed thereon.
